EDUCATION

California State University, Fullerton

B.S. in Computer Science

Fullerton, CA

Aug 2025 – May 2027

Irvine Valley College

Completed lower-division coursework in Computer Science before transferring

Irvine, CA

Aug 2023 – May 2025

Relevant Coursework

Software Engineering, Cybersecurity

TECHNICAL SKILLS

Languages: Python, Javascript, HTML/CSS, SQL, C++, C#, C

Frameworks/Tools: React, Node.js, Flask, MongoDB, Material-UI, Unity, Linux

EXPERIENCE

Uber Driver

Uber

May 2018 – June 2023

Irvine, CA

- Completed thousands of safe, on-time rides while maintaining a 5-star customer service record.

PROJECTS

IoT Wi-Fi Lighting System | *Python, Javascript, Flask, React, C++*

- Designed and built a network of Wi-Fi LED light tubes controlled in real time over a custom UDP protocol.
- Developed a full-stack web application control interface using Flask and React, enabling instant color and animation triggering over local Wi-Fi.
- Programmed ESP8266 microcontrollers in C++ to execute animations and process UDP lighting commands.
- Added real-time device status reporting so the web application can monitor connectivity and responsiveness.
- Engineered custom 3D-printed housings for durability and professional stage presentation.

Food Rating App | *Python, Javascript, Flask, React*

- Led a team of five to develop a Yelp-style food-rating app focused on Cal State Fullerton's campus, featuring food trucks, eateries, and day-specific truck arrival/departure schedules.
- Built an interactive Leaflet map that displayed truck locations, operating hours.
- Implemented a Flask backend with MongoDB to store reviews, food-truck metadata, and scheduling information.
- Developed a responsive React frontend integrated with RESTful API endpoints for browsing businesses, submitting reviews, and viewing the interactive map.
- Managed sprints, task assignments, version-control workflow, and code reviews to deliver a polished and fully functional application on time.

2.5D Platformer Game | *Unity, C#*

- Developed a LittleBigPlanet-inspired 2.5D platformer prototype in Unity featuring a fully functional single level with complete physics, collision, and player control systems programmed in C#.
- Implemented gameplay mechanics including spawn points, checkpoint logic, and death-zone respawning with custom sound effects and animations for immersive feedback.
- Designed and scripted environment interactions and hazard triggers, creating a polished, re-playable demo that demonstrates object-oriented design and game physics programming skillsets.

EXTRACURRICULAR

Association for Computing Machinery (ACM) | *Club Member*

Aug 2025 – Present
